

Provisional programme 2-Day Workshop on Introduction to CBT for Tinnitus, Hyperacusis and Misophonia

25-26 April 2024 Venue: Birkbeck college, University of London, London, UK

Course tutor: Dr Hashir Aazh, BSc, MSc, PhD

This workshop has 12 CPD points. Certified by the CPD Certification Service as compatible with global continuing professional development principles.

	Day 1
Time	Topic
	"Synopsis"
9:00-10:30	Introduction to the Cognitive Behavioural Therapy (CBT) for
	Tinnitus, Hyperacusis, and Misophonia
	"Theoretical underpinnings, research evidence and practical implications."
10:30-11:00	Break
11 00 12 00	
11:00-13:00	Differential Diagnosis: Tinnitus Disorder, Hyperacusis, Loudness
	Recruitment, Misophonia and Noise Sensitivity
	"By the end of this session, participants should be able to distinguish between
	tinnitus disorder which requires CBT intervention and non-distressing tinnitus. They also should be able to distinguish between hyperacusis and misophonia using
	audiological tests, self-report questionnaires and clinical interview."
13:00-14:00	Lunch
14:00-15:00	Audiological Investigations in Patients with Tinnitus, Hyperacusis
	and Misophonia
	"By the end of this session participants will be able to (1) explain the audiological
	characteristics of tinnitus, hyperacusis and misophonia in an ENT/Audiology
	clinical population and (2) perform and interpret pure-tone audiometry and
	uncomfortable loudness levels tests using evidence-based methodology which
	reduces the risk of discomfort among patients with tinnitus and/or hyperacusis."
15:00-15:30	Break
15:30-17:00	Psychometric Assessment for Tinnitus, Hyperacusis, Misophonia
	and Other Psychological Comorbidity
	"This talk focuses on reviewing the clinical application of a wide range of self-
	report questionnaires for assessment of severity of symptoms and the disability
	related to tinnitus, hyperacusis and misophonia. In addition, by the end of this
	session, participants should be able to select and apply a wide range of specialist self-report tools for screening of underlying panic disorder, phobia, obsessive
	compulsive disorder, generalised anxiety, suicidal ideations, health anxiety,
	insomnia and depression and make appropriate onward referral to mental health
	services for further investigations and treatment."

	Day 2
Time	Торіс
	"Synopsis"
9:00-10:00	Case Conceptualization (Formulation) And Treatment Plan
	"By the end of this session, participants should be able to develop a CBT
	formulation explaining the development and maintenance of troublesome tinnitus or
	hyperacusis distress."
10:00-11:00	Establish Relationship Using Client-Centred Counselling Skill
	"By the end of this session participants should be able to demonstrate an
	understanding of the theoretical and empirical underpinnings of client-centred
11 00 11 00	counselling model of Carl Rogers."
11:00-11:30	Break
11:30-12:30	Explore and Enhance Patient's Motivation for CBT
	"This practical session provides an opportunity for participants to practice
	principles of motivational interviewing (MI) in the context of tinnitus and
	hyperacusis rehabilitation. MI is "a collaborative conversation style for
12.20 12.20	strengthening a person's own motivation and commitment to change" Lunch
12:30-13:30	
13:30-15:00	10 Steps of CBT For Tinnitus, Hyperacusis and Misophonia
	Rehabilitation
	"In this talk, a programme of CBT comprising 14 therapy sessions will be
	introduced. This is a specialised therapy for tinnitus, hyperacusis and misophonia rehabilitation and comprises four stages: I) Assessment, II) Preparation, III) Active
	treatment, and IV) Maintenance stage. The content of the therapy briefly comprises
	(1) education about tinnitus, hyperacusis and misophonia and relevance of CBT, (2)
	enhancing patient's motivation to engage with the therapy process, (3) setting
	goals, (4) formulation, (5) identifying troublesome thoughts, (6) identifying
	avoidance behaviours and rituals, (7) SEL (Stop Avoidance, Exposure, & Learn
	from it), (8) KKIS (Know, Keep on, Identify, Substitute), (9) identify and challenge
15.00 15.20	deeper thoughts and beliefs, and (10) integrating CBT into lifestyle (CBStyle)."
15:00-15:30	Break
15:30-17:00	What to Expect From CBT: Reflections on Clinical Practice
	"By the end of this session participants will be able to describe the expected
	outcomes for CBT focused on tinnitus, hyperacusis and misophonia. They should be able to predict the treatment success based on patient's characteristics. The data for
	consecutive patients enrolled and completed CBT will be reviewed. Prior to start of
	the therapy, 65% of patients had at least one psychological symptom that met the
	"caseness" criteria of the UK mental health services. This reduced to 37% after the
	therapy. The mean Tinnitus Impact Questionnaire (TIQ), Hyperacusis Impact
	Questionnaire (HIQ), and Misophonia Impact Questionnaire (MIQ) reduced from
	14.2 ($SD=36$), 12 ($SD=9.2$), 16 ($SD=8.1$), respectively, before treatment to 5.4
	(SD=4.8), 4.5 (SD=5.2), and 8.3 (SD=7.2), respectively, after treatment. In this talk, we will employ the characteristics of patients who did not hencit from the
	talk, we will explore the characteristics of patients who did not benefit from the treatment compared to those who did. For example, do patients who were receiving
	psychological/psychiatric care (medication or psychotherapy) in addition to their
	tinnitus/hyperacusis/misophonia-focused CBT show better outcomes compared to
	those who did not."
